

I do not agree with the limitation of local traffic and weather information from the XM radio programming. It is the same as cable/satellite TV being able to offer local TV channels. If we make a choice to pay for a service, taking away the convenience of local information does not seem fair. Satellite radio is the future for radio patrons and as more cars become equipped with the hardware, it will become the norm like cable/satellite TV.

Do not interfere with natural competition between businesses.

I oppose HR 4026.

Thank you.
